ABOUT

Postgraduate student with growing experience in AI-assisted development and AWS Cloud. Currently training and improving in cloud deployment, scalable architectures, and application development using AWS compute, networking, and storage services. I also share my cloud journey and walkthroughs on LinkedIn as I keep learning and building more hands-on experience

PROJECT WORK

Wholesaler Retailer Management System : This was my UG final year project. I built a system where wholesalers and retailers can manage stock, orders, and sales details.

- I used AWS S3 to host the project as a static site with a public link.
- For the backend data, I used a PostgreSQL database (similar to AWS RDS) to store inventory and sales information.

Building Resume : I created a resume-building web app with multiple templates.

- I hosted it on AWS EC2 (Amazon Linux) and handled the setup and deployment by myself.
(Project demo is available on my LinkedIn.)

LearnFlow – E-Learning Platform : This is my project with both web and mobile versions.

- I set up my own AWS VPC, used a custom AMI, deployed instances with Auto Scaling, and connected them through an Application Load Balancer. I also configured CloudWatch to check instance health and scaling activity. **(Project demo is available on my LinkedIn.)**
-

CERTIFICATION

AWS Certified Cloud Practitioner (CLF-C02)

Issued: 27 Nov 2025

Credential URL: https://www.credly.com/badges/d0aeb45f-91c5-4163-82d4-0f847ae15bc5/public_url

EDUCATION

Master of Computer Applications

Kongu Engineering College

Aug 2025 - Now

Bachelor of Science in Computer Science

Dr. N.G.P Arts and Science College

April 2022 - April 2025

SKILLS

- **Cloud (AWS) :** EC2 (Amazon Linux), S3 hosting, VPC setup, Subnets, AMI creation, Auto Scaling Group, Load Balancer, CloudWatch, Route 53.
 - **AI-Assisted Development:** Proficient in using AI tools to write, debug, and complete projects without advanced coding skills.
 - **Languages Experienced With:** Java, TypeScript, PostgreSQL, SQL — worked with them through AI-driven project development.
 - **Learning & Development:** Currently improving my cloud and deployment skills through more practice.
 - **Problem-Solving:** Able to identify errors and issues in ongoing projects and find solutions mostly by myself if can't get assist from ai.
-
